Multiple integration options

Process Automation Architecture

Process Automation Architecture diagram showing: Customer A and Customer B → Omnichannel capture (Email, Folder, Server, Compleo Gateway) → Azure Form Recogniser → Compleo Hybrid → Supplier (ERP Order processing) and Validation & Signature

- Businesses receive customers' purchase orders (POs) in bulk through multiple channels:
  - Email
  - API

- POs arrive in various formats, including:
  - Hardcopies, Handwritten documents often with varying types and layouts
  - PDF

- Intelligent mapping is applied, which includes:
  - Handling conversions, such as SKU to internal nomenclature

- Sales Orders are created in the ERP system in real-time

- Different layouts are encountered, such as:
  - Dynamic customer details placed in different locations
  - Various line items

- Data is extracted in formats like:
  - Excel
  - CSV
  - Any other compatible format

- Before creating Sales Orders (SOs), condition checks are performed, covering aspects like:
  - Duplication
  - List price verification
  - Stock
  - Credit checks
